+63 915 964 2894 | lancekirbylazaro@gmail.com | <https://www.linkedin.com/in/lancelazaro/> | <https://portfoliolazaro.netlify.app/>

## SKILLS

---

**Data & Analytics:** Power BI, Power Query, DAX, SQL, Streamlit

**Backend & Databases:** SQLite, PostgreSQL, MySQL, Supabase, Firebase

**Languages:** Python, C#, JavaScript

**Tools:** Git, Github, Pandas, Numpy

## EDUCATION

---

**Mapua Malayan Colleges Laguna**

**2022-2026**

Bachelor of Science in Computer Science, Specialization in Data Science and Analytics

## EXPERIENCE

---

**Business Intelligence and Data Analytics Intern – AF Payments Inc.**

**May 2026 - August 2026**

- Built a 7-page interactive Power BI dashboard suite analyzing non-rail transit transactions for AFPI, the operator of the beep™ contactless card and automated fare collection system across Metro Manila's LRT and MRT lines, buses, and retail partners, using SQL (Amazon Athena), Power Query, and DAX.
- Extracted, validated, and transformed large-scale transaction datasets from AWS Athena through optimized SQL queries, ensuring reporting accuracy against source records.
- Designed dashboard views covering beep card and non-beep card usage, fleet-level transport operations, card loading, route performance, and fare exceptions, surfacing usage trends that supported data-driven decisions across finance and operations teams.

## PROJECTS

---

**Ready, Set, Kinder | Supabase (PostgreSQL), Unity, JSON, C#, JavaScript**

- Developed a mobile-based gamified assessment app in Unity with a Supabase backend, evaluating preschool readiness through six literacy, numeracy, and cognitive mini-games.
- Designed a system that automatically scores learner performance, transmits gameplay data via JSON to the backend in real time, and generates readiness dashboards for teachers and parents.
- Piloted with 16 learners, 2 teachers, and 13 parents, achieving an 81.2% readiness rate, 84.18% mean score, and a "OK to Good" System Usability Scale rating.

**NBA SQL Analytics Dashboard | Python, SQL, SQLite, Streamlit, Plotly, Pandas**

- Designed a normalized SQLite database schema (players, teams, season stats, salaries) with foreign-key relationships to model multi-season basketball performance and salary data.
- Wrote 7 advanced SQL queries using window functions (RANK(), LAG()), multi-table joins, and aggregates to analyze player value, growth, and team scoring balance.
- Found international players held a slight efficiency edge, salaries rose 60–80% by position, and top performers skewed toward guards and centers.

**Spotify Charts BI Pipeline and Dashboard | Python, SQLite, SQL, Power BI, openpyxl**

- Built an end-to-end BI pipeline in Python, generating a simulated Spotify chart dataset (artists, songs, regions, and streaming trends) and loading it into a SQLite database.
- Designed a relational schema, wrote 8 analytical SQL queries on streams and trends, then built an interactive Power BI dashboard via ODBC.
- Found Drake, Taylor Swift, and The Weeknd led total streams, with steady growth from 2020–2025 and balanced totals across all 20 markets.

## CERTIFICATIONS

---

Google Data Analytics Professional Certificate | Google Cloud Computing Foundations Certificate | IBM AI Developer Professional Certificate | Data Analytics: From Tap to Insight
