Academic Year 2025 – 2026

CS199F (CS PRACTICUM) NARRATIVE REPORT

Submitted By:

LAZARO, Lance Kirby G.

Submitted To:

Mrs. Jonalyn G. Ebron

Submitted to the Faculty of Mapúa Malayan Colleges Laguna
In Partial Fulfillment of the Requirements for the Degree of
Bachelor of Science in Computer Science

OVERVIEW

Company Background

AF Payments Inc. is a pioneering financial technology consortium in the Philippines that has fundamentally transformed the landscape of urban mobility and cashless transactions. Established in 2014 as a landmark joint venture between two of the country's largest conglomerates—the Ayala Group and Metro Pacific Investments Corporation (MPIC)—the company was created to modernize the nation's public transit infrastructure through a unified Automated Fare Collection System (AFCS). By introducing the contactless beep™ card across Metro Manila's light rail networks, modern buses, and retail partners, AF Payments Inc. successfully bridged the gap between legacy transportation systems and digital financial solutions. This paper examines the company's background, its strategic role in promoting financial inclusion, and its broader impact on the development of smart cities in emerging markets.

Address

Office Address:

Ground Floor, Welfare Building, LRTA Compound, Aurora Boulevard, Brgy. 190, Pasay City, Philippines 1300

Immediate Supervisor:

Hervey Jay Fulgueras, Senior Finance Supervisor - Settlement & Reconciliation

Department/Division:

Finance and Data Science Department

Nature of Assignments or Tasks Given

Much of my work during the practicum centered on learning how the company's databases were structured, pulling and interpreting transaction data, and turning it into visual reports the team could rely on for decision-making. I carried out these tasks as a Data Science Intern under the Finance and Data Science Department, where the work revolved around data processing, reporting, and business intelligence for the company's non-rail transaction channels, such as bus and retail beep™ payments.

My Responsibilities

- Building a clear picture of how non-rail transaction records are stored and organized, by working through the organization's database architecture—its tables, fields, and relationships.
- Transforming raw data using Power Query and designing clear, usable visualizations all came together in an interactive Power BI dashboard built for non-rail operations.
- Making sure every report stayed accurate and consistent meant checking dashboard outputs against the original source records.
- Non-rail transaction datasets needed for reporting and analysis were pulled and prepared through SQL queries written and refined using Amazon Athena.

Total Hours Rendered

Description	Details
Required Hours	480 hours
Hours Completed	296 hours
Practicum Period	May 20, 2026 – July 25, 2026
Work Schedule	Monday – Friday, 8hrs per day

Output

Output 1: Development of SQL Queries Using Amazon Athena

Tools Used

- Amazon Athena
- SQL

Objective

Non-rail transaction data—covering bus and retail beep™ activity—needed to be extracted, filtered, and prepared for reporting and dashboard development, which meant building SQL queries in Amazon Athena able to do exactly that.

Description

Putting together the SQL queries I wrote in Amazon Athena meant identifying the right tables and columns, applying the correct filters, and double-checking for accuracy and completeness. Those queries pulled non-rail transaction records, primarily bus and retail beep™ data, straight from the company's database, and the resulting dataset became the foundation for all subsequent analysis and visualization work in Microsoft Power BI.

Screenshot

Figure 2. Results of the SQL Query

Discussion

Writing SQL queries that pulled exactly the information the non-rail dashboard reporting required started with groundwork—mapping out the company's database structure, how its tables connected to each other, and what each column was meant to capture.

If there's one lesson this stage drove home, it's how much a reliable business report depends on getting the extraction right from the start. Extracting transaction records that matched specific business needs meant constantly rewriting and testing SQL statements as the queries evolved, and every dataset was checked against expected values before it ever reached Power BI—a routine that, in the end, taught me a great deal about how database querying really works in practice.

Output 2: The Development of Non-Rail Operations Dashboards with the Use of Power BI

Objective

Turning non-rail transaction data and performance metrics into visuals that make monitoring easier and support decisions grounded in data—that was the goal behind designing this interactive Power BI dashboard.

Description

The finished Non-Rail Operations Dashboard lets users track transaction trends, dig into operational data, and make decisions with more confidence. Built in Microsoft Power BI, it converts validated non-rail transaction data into visual reports that are easy to read and interact with, using a mix of charts, cards, and slicers designed to surface the numbers that matter most. I was tasked to do three different sheets which are Transport NonBeep, Transport Beep, and Beep Loading.

Tools Used

- Amazon Athena
- SQL
- Microsoft Power BI
- Power Query
- DAX

Screenshots

Figure 3. Non-Rail Operations Dashboard – Transport Non-Beep

The Transport NonBeep dashboard page focus on tracking public transport transactions that do not use the Beep card payment system, such as cash or other alternative payments. At the top of the page, high-level cards show overall metrics like the total number of transactions, unique passenger counts, total money collected, average fares, and how many vehicles are active in the system. The page features a bar chart comparing which transport routes bring in the most money, alongside a monthly trend chart that tracks how passenger activity and fare amounts change over the year. Another bar chart shows which transport cooperatives or participants are handling the most passenger trips, while a smaller chart breaks down the passenger types to show who is riding the most, such as regular passengers, students, seniors, or persons with disabilities. The page also includes a pie chart that compares the share of trips taken on buses versus jeepneys, and a line graph tracking how busy the transit system is on different days of the week.

Figure 4. Non-Rail Operations Dashboard – Transport Beep

The Transport Beep dashboard page tracks transport transactions that specifically use Beep cards for payment. At the top, it has key metric cards that track total Beep transactions, fare amounts, and counts for different transaction statuses. The charts on this page show which Beep-enabled routes are bringing in the most revenue and how those transaction numbers trend month-to-month over the year. It also includes a bar chart showing which specific transport operator handles the bulk of the Beep card taps, and another chart breaking down the passenger profile types using the cards. Additionally, there is a pie chart that displays the percentage of successful versus unsuccessful transaction statuses, and a line graph showing how Beep card usage rises and falls across the days of the week.

Figure 5. Non-Rail Operations Dashboard – Beep Loading

The Beep Loading dashboard page is all about tracking how and where passengers add money (or "load") their Beep cards. At the top of the page, the main metric cards show big-picture data like the total number of load transactions, the overall amount of money added, the average amount loaded per transaction, the number of different loading agents used, and how many active segments are in the system. The first bar chart on the left compares the total load amount across different business categories, highlighting which methods—like retail loading—are the most popular for adding money. In the middle, a monthly trend chart tracks how the number of loading transactions and the total load amounts change over the months of the year. On the right, another bar graph shows which specific participants or platforms, such as mobile apps, are used the most by passengers to top up their cards. On the bottom row, the first chart breaks down the loading transactions by passenger profile types, showing whether standard users or students are adding money the most. Next to it, a pie chart displays the breakdown of transaction message types to track how the value was processed and added. Finally, a line graph on the bottom right shows how loading activity rises and falls throughout the days of the week, helping to identify which days passengers top up their cards the most.

Discussion

Cleaning and restructuring the data through Power Query was the first step once the non-rail transaction data had been pulled, verified, and brought into Microsoft Power BI. From there, DAX measures came into play, calculating key performance indicators and keeping the reporting dynamic as the dashboard began to take shape.

Drilling into the data by date, location, or other relevant criteria is possible thanks to the slicers and filters built into the dashboard. Spread across several report pages, it covers a different slice

of operational performance on each—transaction summaries, loading and usage patterns, GFS versus NGFS comparisons, hourly transaction behavior, and exception tracking.

By the end, the dashboard had become a fast, interactive way for stakeholders to keep an eye on non-rail operations and dig into transaction performance whenever needed. Getting there took several rounds of testing to make sure every visual matched the underlying source data, along with feedback from my supervisor that shaped much of the final layout, usability, and overall presentation.

Synthesis

Learnings Gained

How enterprise-scale data gets organized, and how well-structured queries can pull large volumes of it efficiently for reporting and analysis, became far clearer to me over the course of this practicum, largely thanks to how much it sharpened my SQL skills, especially in writing and fine-tuning queries in Amazon Athena.

Working with real datasets, rather than classroom examples, sharpened my analytical thinking and exposed me to visualization practices used across the industry. That came through hands-on experience building Power BI dashboards—transforming data through Power Query, writing DAX measures, and designing visuals that actually communicate something useful about the business.

Watching how my supervisor approached technical problems taught me troubleshooting habits and a kind of professional discipline no classroom really prepares you for. Beyond that, I came to appreciate just how much validation matters before any report goes out the door, since even small inconsistencies can throw off a decision, making accuracy, attention to detail, and careful verification non-negotiable in this line of work.

Realizations

Communication, collaboration, adaptability, and a genuine willingness to keep learning matter just as much or maybe more than technical when it comes to producing good work as part of a team. That's one realization that has really stuck with me since this practicum.

Building a dashboard people can trust takes patience, constant validation, ongoing refinement, and a solid grasp of what the business actually needs the report to show—challenges that never really came up in my school projects until I worked with real-world data.

Every obstacle I ran into turned into a chance to sharpen my skills, build my confidence, and think more like a professional. More than anything else, that's what convinced me how much growth comes from simply asking for guidance and learning from people who've been doing this longer than I have.

Conclusion

Real exposure to data analytics in practice, and a stronger grip on SQL, Amazon Athena, Power BI, Power Query, and DAX became far more familiar tools by the end of my practicum at AF Payments Inc., alongside sharper problem-solving, communication, teamwork, and adaptability. Looking back, it turned out to be a genuinely rewarding experience, one that let me put years of academic learning to work in a real professional setting.

A supportive environment and a supervisor willing to guide me made me more confident in what I could do and kept me motivated to keep improving. Past the technical skills, this

experience taught me how much accuracy, continuous learning, and collaboration matter in producing work that actually holds up.

This practicum leaves me better prepared for a future in data analytics and, all in all, more certain than ever that I enjoy using data to solve real problems.

Appendices

1.0. Competency-Based CV

LANCE KIRBY G. LAZARO

lancekirbylazaro@gmail.com | City of Binan | (63+) 915 964 2894

[LinkedIn](#) | [Github](#)

SKILLS

Languages: Python, Java, SQL
Data & Analytics: NumPy, Matplotlib, Pandas, SQLite, Plotly, Streamlit
Backend & Databases: MySQL, Supabase, Firebase
Web Development: Java, CSS, HTML
Tools: Git, GitHub, VS Code, XAMPP, Power BI

EDUCATION

Mapua Malayan Colleges Laguna **2022-2026**
Bachelor of Science in Computer Science, Major in Data Science and Analytics

CERTIFICATIONS

Google Cloud Computing Foundations: Cloud Computing Fundamentals **May 2024**

PROJECTS

NBA SQL Analytics Dashboard - Python, SQLite, Streamlit, Plotly, Pandas

- Designed a normalized relational database tracking player stats, salaries, and teams across 10 NBA seasons.
- Wrote advanced SQL queries using window functions (RANK, LAG) to analyze player efficiency and salary value.
- Built an interactive Streamlit dashboard with Plotly scatter plots, trend lines, and a sortable value table.

Spotify Charts BI Pipeline & Dashboard - Python, SQLite, SQL, Power BI, Pandas

- Built an end-to-end BI pipeline generating 314,000 Spotify chart entries across 20 countries and 6 years.
- Wrote analytical SQL queries covering stream trends, artist dominance, and regional breakdowns.
- Connected data to Power BI and built an interactive dashboard with a map, bar chart, line chart, and slicers.

Weather Forecast App - HTML, CSS, JavaScript, Open-Meteo API, Leaflet.js

- Developed a real-time weather dashboard displaying current conditions, hourly forecasts, and a 7-day outlook.
- Integrated an interactive Leaflet.js map with live weather overlays for cloud cover, precipitation, and wind.
- Added geolocation support and city search with animated rain effects and dynamic backgrounds based on weather conditions.

2.0. Endorsement Letter

May 20, 2026

Ms. Sherilyn Trinidad
HR Admin and Facility Associate
AF Payments Inc.
Ground Floor, Welfare Building, LRTA Compound, Aurora Boulevard, Brgy. 190, Pasay City,
Philippines 1300

Dear Ms. Trinidad,

The BS Computer Science program of Mapúa Malayan Colleges Laguna requires their students to undergo a Practicum program for a minimum of 480 hours during the third term of our academic calendar.

We would like to request that Mr. Lance Kirby G. Lazaro, permitted to have his training in your company. We believe that your company can provide the relevant exposure necessary for our students to achieve the intended learning outcomes for the BS Computer Science program. We are confident that he will be able to acquire the practical knowledge and skills expected from a Computer Science graduate which, in turn, would guarantee a continuous supply of CS professionals needed by your company.

We thank you for your favorable action and we look forward to a more meaningful linkage that is mutually beneficial to our students and your company.

With warm regards,

JONALYN G. EBRON
BS Computer Science Program Chair
College of Computer and Information Science

REVISION NO: 00
REVISION DATE: May 10, 2016

STUDENT TRAINING AGREEMENT AND LIABILITY WAIVER

IMPORTANT INFORMATION

- THIS FORM IS TO BE ACCOMPLISHED AND SUBMITTED BY STUDENT TRAINEE TO THE PRACTICUM ADVISER BEFORE STARTING THE PRACTICUM.
- READ AND UNDERSTAND THE PROVISIONS OF THIS AGREEMENT AND WAIVER.
- ENSURE THAT ALL SIGNATORIES SIGN THE FORM.

I, LANCE KIRBY G. LAZARO, and a student of MALAYAN COLLEGES LAGUNA (hereinafter referred to as "MCL"), do hereby voluntarily undergo on-the-job training at AF Payments Inc., hereinafter referred to as the "Host Company", located at Wellness Building, LRTA Compound, Aurora Boulevard, Barangay 190, 1300 Pasay City, under the following terms and conditions:

- That the practicum training will commence on May 20, 2026 and ends on July 25, 2026 and will have to complete a minimum of 480 hours required for the on-the-job training;
- That I shall observe proper decorum and act professionally at all times and abide by the Company's rules and regulations and comply with those imposed for the training program, otherwise, I shall be excluded from further participation;
- That in the course of my training program, I may have access to information which may be of confidential in nature and proprietary to the Company, for which I may be required to execute a confidentiality and non-disclosure agreement as a prerequisite to my participation in the training program;
- That the time I will spend on the training program in the completion of my on-the-job training requirements will not and should not be interpreted or construed as working hours and should be regarded as non-compensable. Provided that, the Company may, as a unilateral act of liberality or generosity on their part, provide me with meal, travel, transportation allowances, accommodations, etc.;
- That I fully understand that notwithstanding the allowances enumerated in the preceding section which I may receive, there exists no labor-management and/or employer/employee relationship between me and the Company where I will undergo my training;
- That I shall exercise due care and diligence in the tasks assigned to me and personally be made answerable for any and all liabilities for damage to property or injury to third person, which may be occasioned by my intentional or negligent acts during the course of my on-the-job training;
- That I shall likewise hold the Host Company and MCL free and harmless from any and all liability and responsibility for any sickness or injury to myself and third parties and damage to property which I may sustain and/or may occur at any time during the training program, including time spent in traveling to and from any and all premises and locations where I may be required to go to as part of my training program;
- That the Company reserves the right to discontinue my training on reasonable grounds upon written notice to MCL and myself. Additionally, in the event my training program is discontinued for reasons attributable only to myself, I may be made to reimburse the Host Company for any/all the allowances, stipends, etc., which I may have received from them during and prior to the termination of my training program;
- That in addition to my liability under section *g* and for the pre-termination of my training program provided for under section *h* hereof, I may be subjected further to disciplinary action in accordance with the school's student manual and/or be a ground for disqualification from graduation;

Signed on this 20TH day of MAY 2026.

DATE	MAY 20 - MAY 22	AREA ASSIGNMENT	FINANCE AND DATA SCIENCE
TASK	Orientation	SHIFT/TIME	8:00AM-5:00PM / 6:30AM - 6:00PM

The first week of my OJT training here in AF Payment Inc. started mostly with orientations, getting a tour around the whole place, getting to know people in the whole workspace, and familiarization with the tools, data, and softwares we're going to use for the whole OJT period. We also got our own laptops and access pass to the whole office. I really appreciate the people here because they treated us like we were family right away. For the first day, I just listened carefully to the whole orientation, I set up my laptop, logged in to all the accounts they provided and thats about it. For the second day, we were given two excel files that had a lot of information about what we were going to do in AF payments. It had a lot of SQL codes for specific scenarios and I tested some of the codes out in VS code. Two of my batchmates started a week before me so I just observed and took notes on what they were doing. For the third and final day of week 1, I was grouped with Jerome since Wilbert and Noela were already assigned to a task. We were told to just observe what Noela and Wilbert were doing since they started a week before us and we still didn't have access to the database since its in AWS athena. We also had Intern day since it was Friday where we could pick whatever we wanted to eat for our "meryenda" which was a treat from our supervisors. So that is all for my week 1 OJT weekly journal, I learned a lot even though we were mostly just listening and observing. I had fun learning the database from LRT and beep cards and I'm excited to see what's coming for the following weeks to come.

DATE	May 25-26 - May 28-29, 2026	AREA ASSIGNMENT	Finance and Data Science
TASK	Familiarization with Athena and Database	SHIFT/TIME	8:00AM to 5:00PM

On day 4, I was still getting used to the company's database as it was larger than I was used to working with. I spent the whole day making sample codes in athena and trying to solve problems given to us by our supervisor. It was really confusing at first but at the same time it was fun because it was a whole new environment for me.

On day 5, it was still the same thing as day 4. Athena took some time to get used to since I was always just using VS code for my sql projects in college. We used athena all day as well as the real-world transportation database used by LRMC.

On day 6, we tried to compare the results of our queries with the real-life records to see if our work and output was accurate. It didn't work out as well as I wanted to since there were big differences in the output I got vs. the output my supervisor wanted.

On day 7, I tried to fix the bugs and errors that I got from day 6. It just needed a few tweaks and then it was 98% accurate. I still needed to think what else to tweak for it to be 100% accurate. It was very interesting to work on that because it taught me patience when working on a real-life database.

DATE	June 1, 2026 - June 5, 2026	AREA ASSIGNMENT	Finance and Data Science
TASK	Project Refinement and Visualization	SHIFT/TIME	8:00AM to 5:00PM

On day 8, We started the day by finishing up our left-over tasks from last week. We checked our work to make sure it was clean and organized. Then, our supervisor asked us to make monthly sales reports using SQL.

While doing this, I realized how important it is to get the exact data you need so the final report matches what was asked for.

On day 9, it was all about double-checking our SQL queries. We tried out different codes again and conditions to see if the results came out correct and matched up every time. This time it was a bigger database compared to last week. This is what we'll be using for our system.

This taught me that even changing a tiny part of the code can totally change the final numbers.

On day 10, We spent today comparing our SQL results with the real data records to see if they were matching.

Once we looked closer at where the data was coming from and fixed the errors, our supervisor checked and approved it.

It showed me why you have to pick the right data source from the start.

On day 11, We took the clean data and saved it as a CSV file to start building a report in Power BI.

We tried out a few different charts and graphs to see which ones made the data easier to read. This project helped me see how you can take a bunch of raw numbers and turn them into a clear picture that actually helps people make good decisions.

DATE	June 8, 2026 - June 11, 2026	AREA ASSIGNMENT	Finance and Data Science
TASK	Project Refinement and Visualization	SHIFT/TIME	8:00AM to 5:00PM

For the fourth week of my internship, my main focus was finishing up the SQL query results and building the Power BI report so we could analyze the data visually. This week was all about making sure the data was correct, getting the datasets ready, and turning the numbers into clean charts that help people make choices.

On day 13, I spent today checking our query results again by matching them up against the actual real data records. After fixing a few things and double-checking the work, everything finally matched up perfectly with the source data. My supervisor looked over the results and approved them, which proved that the data was correct and reliable. Doing this helped me realize just how important it is to check your data so your reports can actually be trusted.

On day 14, Once the data was fully approved, I started getting the dataset ready for Power BI by checking the exported CSV file. I made sure all the rows and columns we needed were there and that report ends up looking bad.

On day 15, Today, I brought the clean data into Power BI and started making the first version of the report with some basic charts. I tried out different types of graphs and layouts to figure out the best way to show the data clearly. I ran into a few small issues trying to pick the right visuals, but I fixed it by testing out different options until I found the ones that looked best.

On day 16, I spent the final day cleaning up the Power BI report by looking over the charts and making small adjustments so they were easier to read and accurate. I wanted to make sure the final version perfectly matched the approved query data so anyone looking at it could understand it easily.

DATE	June 15, 2026 - June 19, 2026	AREA ASSIGNMENT	Finance and Data Science
TASK	Project Refinement and Visualization	SHIFT/TIME	8:00AM to 5:00PM

During my fifth week as an intern, I kept working on our Power BI dashboard and getting all the datasets ready for the charts.

To start, I set up a shared workspace so my teammates and I could easily collaborate on the project. From there, I planned out the dashboard's layout, made a basic template, and spent time working from home to build and tweak different charts. I also spent a lot of time pulling and double-checking the data to ensure all the numbers displayed on the dashboard were completely accurate and matched our goals. Finally, our team finished adding the last few charts and organized them onto separate pages by category so the report would be clean and easy to navigate.

Overall, this week really helped me improve my skills in dashboard development, data checking, and report organization. I learned how having correct numbers and clear visuals makes it much easier for people to understand the data and make smart business decisions.

DATE	June 22, 2026 - June 26, 2026	AREA ASSIGNMENT	Finance and Data Science
TASK	Dashboard Validation and Optimization	SHIFT/TIME	8:00AM to 5:00PM

During my sixth week as an intern, I kept working on finishing up our Power BI dashboard. This involved making the last few charts look neat, checking that our data was completely correct, and making improvements based on feedback from our bosses.

Our team started by updating the remaining pages of the dashboard to make them easier to read and look more consistent. When we first showed our draft to our supervisors for review, we noticed that some of our dashboard numbers didn't match up with the reports done by hand. To fix this, we spent a lot of time digging into the mismatch, checking our data sources, and adjusting our database queries. During this process, we also learned some really helpful shortcuts in Athena that made our database work go much faster. Even though we had to keep troubleshooting the queries and testing different things because of data validation issues, we managed to finish the first full draft of the dashboard and wrap up almost all of the visual charts. While waiting for final feedback, we also helped out with some events happening around the office.

Overall, this week was great for improving my skills in building dashboards, checking data, and troubleshooting database queries. It really showed me how important teamwork, constant testing, and accuracy are when you want to make a report that everyone can trust.

DATE	June 29, 2026 - July 3, 2026	AREA ASSIGNMENT	Finance and Data Science
TASK	Dashboard Enhancement	SHIFT/TIME	8:00AM to 5:00PM

During the seventh week of my internship, my main goal was to make the Power BI dashboard look and work better by using the suggestions and comments we got from our supervisor.

We started off the week by cleaning up the charts and tweaking the overall layout of the pages to make everything look neat. After that, we hopped on Microsoft Teams to chat with our supervisor, who gave us some really helpful feedback on how to improve our visuals, organize the data, and make the whole presentation look much more professional. We spent the next few days working through those recommendations, shifting the layouts around, and adjusting the charts so that everything looked clean and matched perfectly. Our supervisor gave us a few more tips and clarifications over Teams, so we jumped right back in to fix the remaining details and make sure every single change aligned with what they asked for.

Overall, this week really helped me get better at editing dashboard reports, taking constructive feedback, and making data look great. It taught me how important it is to keep editing, collaborating, and improving your work if you want to deliver a top-notch dashboard.

DATE	July 6, 2026 - July 10, 2026	AREA ASSIGNMENT	Finance and Data Science
TASK	Designing the Final Layout	SHIFT/TIME	8:00AM to 5:00PM

During the eighth week of my internship, I focused on putting the finishing touches on the Power BI dashboard and completing the very last updates based on our supervisor's advice.

We started the week by going through the dashboard and editing the existing charts based on the recommendations we received. We worked on making the layout cleaner and the charts easier to read so the whole report would be organized and simple for anyone to use. I spent some time reviewing the pages to find any small things we could make better, and applied those quick changes to keep the entire report consistent. By the end of the week, we wrapped up all the edits, making sure the data was completely accurate and looked right on every single chart. Finally, we completed the dashboard, wrote down a summary of all the changes we made from the feedback, and turned in the polished, finished report for review.

Overall, this final week really built up my skills in creating dashboards, making clean charts, and editing reports. It showed me how much paying attention to small details, working through changes step-by-step, and using feedback matters when you want to make a neat and accurate final product.
